

Greenhouse gas emissions intensity

CLP Group – GHG emissions intensity of generation and energy storage portfolio

1. In accordance with the Greenhouse Gas Protocol, direct CO₂ emissions from Jhajjar Power Station's biomass combustion and WE Station's landfill gas from waste for power generation are not included in CLP's Scope 1 CO₂e emissions inventory and are reported separately. In 2025, the CO₂ emissions from Jhajjar Power Station's biomass combustion are 296kt, while the CO₂ emissions from the WE Station's landfill gas combustion are 35kt. Both assets' non-CO₂ GHG emissions (i.e. CH₄ and N₂O) are included in CLP's Scope 1 CO₂e emissions.
2. "On an equity basis" includes Scope 1 and Scope 2 emissions.
3. "On an equity plus capacity and energy purchase basis" includes Scope 1, Scope 2 and Scope 3 Category 3 emissions (direct emissions from the generation of purchased electricity that is sold to CLP's customers).
